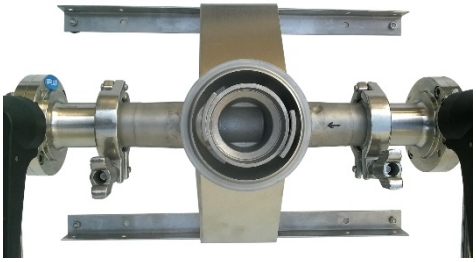
Cartridge filter housing units - stainless

These are complete filter housing units supplied ready-to-use, complete with pressure gauges, vent valves, drain, inlet and outlet valves, hygienic connections, on a floor stand.

Clarity/removal is determined by the cartridge grade and construction material, and absolute grades of cartridge down to 0.2micron are available for 'sterile' filtration. Pre-filters are usually of the 'depth-media' type. Final 'membrane' filters may be integrity tested in place to ensure sterile operation.

Liquid must be fed from a pressure tank, or via a pump, at a controlled flow rate.



Example PRICES
